OM protein - protein search, using sw model

Run on January 31, 2002, 13:20:11; Search time 78.64 Seconds (without alignments)
13.561 Million cell updates/sec

Perfect score: Sequence: US-08-957-709-74 14

Scoring table: 1 AGWIDAGFKGKITL 14

Gapop 60.0 , Gapext 60.0 OLIGO

Searched: 219241 seqs, 76174552 residues

Total number of hits satisfying chosen parameters:

219241

Minimum DB seq length: Maximum DB seq length: 2000000000

Post-processing: Listing first 45 summaries

Database : PIR_68:* pir2:* pir3:* pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genome sequence of the endocellular bacterial symbiont of aphids
Buchnera sp. APS.;
Nature 407:81-86(2000).
-1-FUNCTION: THIS ENZYME IS INVOLVED IN NUCLEOTIDE METABOLISM: IT
PRODUCES DUMP, THE IMMEDIATE PRECURSOR OF THYNIDIME NUCLEOTIDES
AND IT DECREASES THE INTRACELLULAR CONCENTRATION OF DUTP SO THAT
URACIL CANNOT BE INCORPORATED INTO DNA (BY SIMILARITY).
- "ATALYTIC ACTIVITY: DUTP + H(2)O = DUMP + PYROPHOSPHATE.
- "ATALYTIC ACTIVITY: DUTP + H(2)O = DUMP + PYROPHOSPHATE.
                                                                                                                                                                                                                                                                                                            P57623;

                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON GRADIENT ACROSS THE MEMBRANE.

1. SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1)...CF(0) HAS THREE MAIN SUBUNITS: A, B AND C.

1. SIMILARITY: BELONGS TO THE ATPASE EPSILON CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Helicobacter pylori J99 (Campylobacter pylori J99).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRODUCES DUMP, THE INVOLVED IN NUCLEOTIDE METABOLISM: IT PRODUCES DUMP, THE IMMEDIATE PRECURSOR OF THYMIDINE NUCLEOTIDES AND IT DECREASES THE INTRACELLULAR CONCENTRATION OF DUTP SO THAT URACIL CANNOT BE INCORPORATED INTO DNA.

CATALYTIC ACTIVITY: DUTP + H(2)O = DUMP + PYROPHOSPHATE.

CATALYTIC ACTIVITY: DUTP + H(2)O = DUMP + PYROPHOSPHATE.

SIMILARITY: BELONGS TO THE DUTPASE FAMILY.

CAUTION: WAS ORIGINALLY THOUGHT TO BE A PROTEASE-LIKE PROTEIN

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100059 seqs, 36664827 residues
